

Supplementary Tables

1. Type I Error ($\alpha = 0.01$)

Table 1. Empirical values for type I error from the hypothesis test of the interaction between treatments and repeated measures using mixed models with several covariance structures applied to simulated data with I covariance structure, with different numbers of repeated measures and sample sizes, and with statistical significance equal to 0.01

Covariance model	Repeated measure	Sample size		
		4	8	12
